

## Dental Readiness Classification Guidelines

1. A soldier is Class 1 if no dental treatment is required -- this includes the need for a prophylaxis. If a prophylaxis is treatment planned (whether it be an RDH or X2 prophylaxis) the soldier is not Class 1.
2. Some Class 3 criteria are not specific- specifically there are no specified depths of carious lesions that make a soldier a Class 3. The practitioner must make the decision whether the condition is expected to cause a dental emergency in the next 12 months.
3. Detailed guidelines can be found in Ha Policy 02-011, Standardization of Oral Health and Readiness Classifications, 4 Jun 02.
